Through noticing, describing, and imagining, we renew the conversation about life on earth.

ANTHROPOLOGY

It's that simple. Your donation will help fund the vital work happening here in the UC Santa Cruz Anthropology Department. Please help us continue to provide outstanding opportunities for students while achieving our research and infrastructure goals.

Your gift makes all the difference.

ANTHROPOLOGY
At UC Santa Cruz, we don’t study vanishing cultures—we study emerging worlds. We span the subfields of our discipline, including biological anthropology, cultural anthropology, and archaeology. We look to primate anatomy for clues to the course of human evolution; we investigate the cultural borderlands performed in Mexican folkloric dance; we study the bones of long-dead sea creatures to learn how European colonialism transformed Monterey Bay and the lives of its indigenous inhabitants. We share a concern with real-life issues, from the plight of ethnic minorities to the spread of genetically modified organisms.

Our primary areas of strength range from environmental anthropology to food studies, archaeological sciences, feminist anthropology, and the development of entirely new research methods. Unlike at many other institutions, specialists in each of our subfields work together to develop multi-faceted anthropological theory and research. By studying past and present cultures and ways of life, we expand our ability to imagine alternative futures.

ANTHROPOLOGY BY THE NUMBERS

- **3,236** students enrolled
- **563** undergraduate majors
- **49%** of majors are first-generation college students
- **49** Ph.D. candidates
- **28** National Science Foundation Graduate Research Fellowships
- **25** Wenner Gren Dissertation Fellowships
- **23** Institute of International Education Fulbright Fellowships
- **8** Fulbright-Hayes Fellowships
- **19** full-time faculty
- **4+** major faculty awards including the NBI Welfare Society’s Gandhi Pravasi Medal, the Guggenheim Award, and the MacArthur Genius Award
- **6** current presidencies of major professional associations

OUR WORK

At UC Santa Cruz, we don’t study vanishing cultures—we study emerging worlds. We span the subfields of our discipline, including biological anthropology, cultural anthropology, and archaeology. We look to primate anatomy for clues to the course of human evolution; we investigate the cultural borderlands performed in Mexican folkloric dance; we study the bones of long-dead sea creatures to learn how European colonialism transformed Monterey Bay and the lives of its indigenous inhabitants. We share a concern with real-life issues, from the plight of ethnic minorities to the spread of genetically modified organisms.

Our primary areas of strength range from environmental anthropology to food studies, archaeological sciences, feminist anthropology, and the development of entirely new research methods. Unlike at many other institutions, specialists in each of our subfields work together to develop multi-faceted anthropological theory and research. By studying past and present cultures and ways of life, we expand our ability to imagine alternative futures.

OUR MISSION

The problems facing the world are complicated. People see these problems differently, influenced by their location, background, psychology, socioeconomic status, and a myriad of other factors. We look at things in a **nuanced, empirically rigorous, and interdisciplinary way** in order to develop uniquely informed solutions that will make a real difference.

OUR GOALS

To best support our students while producing high-quality research with real-world resonance, we are focused on these specific goals:

- **Enhance the undergraduate experience by:**
  - Expanding field study opportunities
  - Establishing internships overseas at field sites
  - Growing the writing tutoring program
  - Creating smaller class sizes to promote more direct engagement in cutting-edge research

- **Increase resources for attracting and retaining top Ph.D. students and funding their research**

- **Build new, state-of-the-art research labs to develop techniques to support our work**

- **Establish endowed chairs in each of our three core subfields**

- **Establish endowments for naming and expanding anthropology’s public-facing entities, including:**
  - Building a new Archaeological Research Center (ARC)
  - Expanding the Center for Emerging Worlds
